

Are you caregiving for a person with dementia?

What's the purpose of this study?

This is a research study and the purpose is to develop a new dementia measure from the perspective of caregivers: the CAREgiver REported and weighted Dementia outcome measure (CARED).

Who can participate?

Caregivers who are supporting a friend, partner, or family member with dementia.

What is involved?

A Zoom meeting and short survey.

Who can I contact?

If you are interested in learning more about this research project and wish to participate, please email oaqol@mcmaster.ca
