

### Suncatcher Window Décor

Arrange glass gems in a puddle of school glue. Let the project dry for a few days before adding a rope border and twine hanger.

#### You will need:

- Thin, plastic lid (about 3" diameter, such as lid from frosting)
- 10–15 [glass craft gems](#)
- 1/4"-thick [cotton rope](#) (12" piece)
- Twine (24" piece)
- Toothpick
- School glue
- Glue Dots (permanent tack)
- Scissors

Display a picture of a completed [Suncatcher Window Décor](#) project. Crafters will enjoy making these to display in their window or give as gifts.

#### Directions:

1. Squeeze school glue inside a plastic lid, filling it halfway up. Use a toothpick to spread the glue if needed.

2. Place glass gems into the glue. Allow the glue to dry for at least 3 days.
3. Gently pull the rim of the plastic lid away from the dried glue and then pull the suncatcher out. You may still have a little wet glue on the bottom of your suncatcher. To dry the bottom, lay the project flat, with the front side facedown, and allow it to dry for another day.
4. Trim any rough edges with scissors.
5. Tie the ends of the twine together. Attach the twine to the middle of the rope by bringing the tied end of the twine through the loop as shown below. Tighten the twine in place.

6. Apply Glue Dots 1/2" apart all around the outside edge of the suncatcher. Attach the rope to the Glue Dots and cut off any excess. Your suncatcher is now ready to hang in a window!
