## Driving and Dementia

**Thursday, June 4, 2026 at 2:00 pm**

Over time, dementia may cause changes that affect a person's ability to safely drive a motor vehicle. However, a dementia diagnosis does not automatically mean that a person is incapable of driving. Some people may be capable of driving safely for some time after the diagnosis, depending on the timing of the diagnosis and how quickly dementia progresses. In this session we will explore ways to continue driving safely, some of the warning signs that it may be time to stop driving, and tips for transitioning to life without driving.

**Who Should Attend:** People living with dementia and their care partners.

## Visual and Perceptual Changes

**Tuesday, June 23, 2026 at 2:00 pm**

This presentation is about understanding visual and perceptual changes that can happen when a person has dementia. As dementia continues to progress, sensory and perceptual abilities can be affected as well as peripheral vision, depth perception and colour perception. This presentation addresses how these changes impact the person living with dementia's ability to safely and effectively navigate their environment, and provides strategies to address and adapt to these visual and perceptual changes.

**Who Should Attend:** Care partners, family members, and friends of persons living with dementia.
