

Title of Study: Conducting a Gap Analysis of Family Caregivers' Needs during a Global Pandemic

Location: Alberta

Study Description:

The goals of this study are to a) identify the gap between family caregiver needs and available resources during COVID-19, and b) investigate the impact of COVID-19 restrictions and regulations on family caregivers and the people living with dementia that they care for.

What Will Happen During the Study?

Participants will be asked to complete an anonymous, 20-minute online survey about their caregiving experiences during COVID-19. If participants wish, they may indicate their interest in being contacted for a follow-up focus group once the survey closes.

The results of the survey and focus groups are being used to generate informed recommendations for health care policymakers, providers, and other key stakeholders on how to better support family caregivers for people living with dementia.

The link to the survey can be found here:
