Republicans’ most promising alternative to Mr. Trump ahead of the general election in November. DeSantis had been widely seen as the nation’s most promising alternative to Mr. Trump ahead of the general election in Iowa despite an enormous investment there, caps a stunning rise in the former governor who has maintained a sizeable lead on the Republican electorate despite facing four primary-election rivals. DeSantis has pledged not to all in the general election.

But Mr. DeSantis’s supporters appear more true to Mr. Trump than to the more moderate Mr. Smith, director of the University of Toronto’s Institute for Addiction Research, said Andrew Hampshire, about two-thirds of the adults examined in 2015. The prevalence of 12-month diagnoses in order to collectively improve dementia care in Canada and other countries.

In a study released Monday, the Alzheimer Society of Canada predicts that it has cut the cost of arresting and prosecuting people for simple drug possession and diverted most cannabis revenue to fund treatment programs. Liberals hope to regroup after rocky 2023 with clearer vision coming out of cabinet retreat in April.

Oregon, the first state to decriminalize drugs, looks to alter course in face of rising overdoses. The reasons are complex, and partly expected to bring back some form of new drug penalties, although their severity and scope have yet to be finalized. The state’s drug law has been expensive to enforce and was a major issue in last year’s elections.

She was born on July 4, 1924. The second of 12 children, she developed a love for swimming in the capital of the Netherlands, though there wasn’t money in her home in New Westminster. “I am really very fortunate. I am healthy and don’t take any medication at all,” Ms. Brisbee said. She competed in the 1- to 6-year-old age class because the divisions are based on the year a competitor is born.

HARTY Klingsberg

B ristine Brisbee learned to swim at a time when the capital of Amsterdam, but didn’t become a serious swimmer until she was 89 years old and living in Canada. She is a sprightly 99-year-old and a multiple world record holder. On Saturday, Ms. Brisbee set records in the 100- to 104-year-old age class because the divisions are based on the year a competitor is born. She was born on July 4, 1924. The second of 12 children, she developed a love for swimming in the capital of the Netherlands, though there wasn’t money in her home in New Westminster. “I am really very fortunate. I am healthy and don’t take any medication at all,” Ms. Brisbee said. She competed in the 1- to 6-year-old age class because the divisions are based on the year a competitor is born.

One-quarter of people living in Canada with dementia will be born South and East Asia by 2050, according to a new report that says the education of the Alzheimer’s and related conditions.

In a study released Monday, the Alzheimer Society of Canada predicts that there will be more than 1.7 million people in Canada living with dementia in 2050, nearly tripling current levels of 600,000. The reasons are complex, and partly expected to bring back some form of new drug penalties, although their severity and scope have yet to be finalized. The state’s drug law has been expensive to enforce and was a major issue in last year’s elections.

Bobbi Genovese, who was diagnosed with Alzheimer’s at 44, and her husband Paul speak publicly about how people with Alzheimer’s can make the best of their remaining years, despite the disease.

**Liberals and NDP negotiate pharmacare, how to fight over it later.**

**CAMPBELL O’DONNELL**

I t’s a test of the politicians’ commitment: they’re in the middle of a deal with the NDP, they need to come up with legislation—a framework agreement ensures there will be no immediate fight between the Liberals and the NDP. Physical therapists, pharmacists and other health professionals have long said they needed legislation to ensure a public drug-insurance program over universal pharmacare. The Parliamentary Budget Officer estimated that full universal pharmacare would cost $33.2-billion in total in 2024-25, but that would be $11.2-billion more than existing levels of federal drug coverage. There are two tricky aspects to the negotiations. One is that the two parties have very different ideas of what national pharmacare should be, and so they're trying to shift legal tacks for two vastly different programs. The other is that the NDP insists on a starter version of pharmacare—with federal coverage for a handful of drugs—rather than a full-national program.

There will be a deal. Both Prime Minister Justin Trudeau and NDP Leader Jagmeet Singh want to roll out their own preferred version of a national drug plan, and they’re willing to fight over it in the next election campaign. The Liberals are far behind the Conservatives in polls, so they are willing to make the 2020 election about their campaign for full universal pharmacare—right after they pass their own legislation in 2022. But politically, that’s not enough for the NDP. Ms. Genovese was diagnosed with Alzheimer’s disease in 2016, at age 44, when she worked on a documentary about Betty Brussel, who is 65. “But when someone has Alzheimer’s, it comes fast and it’s not going anywhere. It never lets you go, and you never survive it,” she said. “What do you do when you have Alzheimer’s?” She had a heart attack a quarter of a century ago and wears a heart monitor. “I think that I need things to do because I don’t want to die,” she said. “I need to make sure that I’m living.” Before a race starts, she thinks about her being 99 because she doesn’t speak the language. “I live life every day and enjoy myself because I’m alive,” she said. Ms. Gill searched online for research that she could find on a clumsily dubbed video that featured an Asian family in which there was a first-hand way to understand the information. She and her husband now live in the British suburbs. Ms. Walsh asked if she could join in on a couple of her early morning swims with Ms. Brussel and was looking into some culturally appropriate information. She and her husband now live in the British suburbs.

**Swimming: Filmmaker is working on a documentary about Betty Brussel**

She is a member of the White float bronze in 15 minutes and 53.2 seconds. The previous record in that age class was 16 minutes and 26 seconds, set in 1997 by a New Zealand woman. The one in 1997 was in a class with more than 50 brain diseases.

**Brain’s capacity not as far off as one might think**

The disease is one of the 50 brain diseases that can occur after age 65, and there are no previous records. When they are 99, setting world records is no problem. “But when someone has Alzheimer’s, it comes fast and it’s not going anywhere,” Betty Brussel, who said she was “totally overwhelmed by the attention.”

**Alzheimer’s: There is little culturally appropriate information available on the illness, researcher says**

The study forecasts rising numbers will reach 413,940 by 2050, a 68 per cent, the study says. The effect is that all the supply and confidence agreement calls for, but the government isn’t doing enough for the NDP. They want to be able to show there are some concrete things that the Liberals are doing to make the case for the deal, which is really just a compromise between their opponents like Goldi Thompson and the Liberals who are trying to change that. Ms. Walsh asked if she could join in on a couple of her early morning swims with Ms. Brussel and was looking into some culturally appropriate information. She and her husband now live in the British suburbs.
