

# canary

## Are you concerned about your memory?

We are recruiting participants for the Canary study – investigating whether speech and eye movements are early markers of cognitive health issues

### What's involved?

- 🧠 Basic cognitive testing
- 🗣️ Speech recording
- 👁️ Eye movement tracking

### Where?

- 📍 UBC Hospital
- 🕒 30 minute duration  
(with optional follow-up every 6 months for 2.5 years)

### To participate, you MUST be:

- ✓ Able to speak English
- ✓ Able to sign a consent form

### To participate, you must NOT:

- ✗ Have had a recent brain injury (within 18 months)
- ✗ Have a neurological or psychiatric condition with recent medication changes (other than dementia)
